

Redstone Arsenal Environmental Program

Public Comment Period – May 26-June 24

Statement of Basis/Proposed Plan

RSA-57 Inactive Arsenic Waste Lagoons - East

A statement of basis/proposed plan recommends soil excavation, backfill, off-facility treatment/disposal, short-term groundwater monitoring, and institutional controls as the recommended approach for restoring the soil at RSA-057 Inactive Arsenic Waste Lagoons – East in Operable Unit 6 at Redstone.

This document is available for review and comment at the following locations through June 24, 2006:

- Redstone Arsenal Office of the Installation Restoration Branch, Environmental Management Division, Building 4488, Room 327L
- www.environmental.redstone.army.mil under Public Notices

The final cleanup decision will be made only after the public comment period has ended and all the comments have been received and considered. The U.S. Army Garrison will select the alternative in consultation with the U.S. Environmental Protection Agency and the Alabama Department of Environmental Management. It is important to note that the final action may be different from the Preferred Alternative of soil removal and off-site disposal depending on new information or public comments.
